## Point of Sales (Restaurant)

To begin accessing the program, you can access by inserting your 'User ID' and 'Password', which is unique for each user.

#### Page # 2

### <u>Outlet</u>

The shift can be determined by meals and meals are unlimited depend on user definition. To open shift, the previous shift must be closed. The user can define the outlet to open more than one outlet, each outlet can obtain the different menu items.

### <u>Floor Plan</u>

Floor Plan displays the tables setup in each outlet, and also displays the table status such as how many customers at the table, and etc.

When the customer comes, a user can specify the number of customer by clicking on a table image and another dialog box will appear for a user to enter the number of customer and a waiter's ID No. (User ID). After finished filling the numbers, a user will get accessed to cashier interface.

## **Cashier**

Cashier menu is used for items posting, edit the posted items, cancel table, split bill, print receipt and etc. This page will be totally separated into sections such as 'menu items', 'ordered items', and 'total balance'

# <u>Take Home</u>

This menu is used to post the take home order. When a user accesses this menu, the program will automatically create a table called 'THM' for a user to post any ordered item. The menu items will be the same as in the cashier function.
